

SafeBreach Studio

The First No-Code Platform for Red Teams

Your red team needs the ability to run real-world attack scenarios that matter to your organization and provide actionable results. But red-team exercises can be resource-intensive, expensive, and difficult to operationalize—until now.

As the industry's first no-code red-team platform, SafeBreach Studio unifies every aspect of attack planning—from scenario development through execution—in a single, no-code environment. Red teamers of all skill levels can create, customize, and run sophisticated attacks with no coding experience necessary, using a simple drag-and-drop interface that enhances efficiency and provides the data you need to drive results.

SafeBreach Studio is available as part of the SafeBreach breach and attack simulation (BAS) platform and gives your red team the power to:

Run Attacks When & How You Want

Easily generate custom attack plans and control every aspect of an attack, including when and how it runs, associated parameters, sequencing steps, and the desired simulators.

Analyze Threat Results

Analyze attack test results to understand simulation details, parameters, and goals—all mapped to MITRE ATT&CK, individual threat groups, specific industries, or NIST control mapping.

Drive Your Business Forward

Customize visualizations to make the results of red-team exercises actionable and enable consistent communication to stakeholders across the organization. Track progress to confidently communicate security posture improvement over time.

The SafeBreach BAS Platform

SafeBreach offers continuous security validation powered by BAS to test the effectiveness of all layers of your security stack independently and provide unmatched visibility into how your ecosystem responds at each stage of an attack. The SafeBreach platform will enable your security team to execute breach scenarios across the entire cyber kill chain, automate and prioritize remediation, and strengthen your cyber resiliency.

The SafeBreach Advantage

Largest attack playbook in the industry (25,000+ attacks and counting)

Only vendor offering 24-hour SLA for US-CERT and emerging threats

Widest MITRE ATT&CK coverage

Scalable, enterprise-ready platform with simple deployment

Mature technology partner ecosystem
