

SafeBreach Security Posture Optimizer

Achieve Business & Security Program Alignment With a Single View

The mandate for security teams is clear—to defend their organizations against cyber threats. What’s less clear is exactly how they can effectively understand and share the impact of a security program that often utilizes dozens of different controls, tools, and reports. CISOs and executives need one simple way to communicate with stakeholders that cuts through the jargon and avoids getting lost in the technical details.

SafeBreach’s Security Posture Optimizer does just that by distilling your attack simulation results about security control performance from the SafeBreach platform into a high-level snapshot of a security program’s efficacy to:

Quantify Security Posture with a Clear Score

Continuously track organizational security posture and cyber resilience with a single score benchmarked against your baseline.

Track Improvements & Identify Performance Gaps

Automatically map score changes to control performance to understand what’s working well and identify areas of improvement, like configuration changes that create security gaps.

Analyze Attacks & Optimize Remediation Efforts

Gain a bird’s-eye view of which attacks were prevented, detected, or completely missed. Drill down on attack vectors or pivot directly to actionable insights to focus remediation efforts.

Easy to Understand Security Posture for All

The Security Posture Optimizer provides a simple visualization of trackable metrics that can be used by stakeholders across the organization.

For Security Executives

Grow confidence with stakeholders with clear and concise business KPIs

Connect security strategy to business outcomes by quantifying exposure across the enterprise

Justify security investments and highlight their performance ROI

Continuously evolve security program by tracking its performance with a single score

For Security Practitioners

Save hundreds of hours compiling complex security posture reports

Identify performance gaps and optimize remediation efforts over time

Focus on threats that matter the most

Track progress of security control performance and hold vendors accountable

For Executive Stakeholders

Gain visibility and confidence in organizational security program

Understand the overall enterprise risk over time

Inform data-based investment decisions

Compare your organizational security posture against peers of same size and vertical

Testimonials

“SafeBreach was instrumental in validating and verifying our current security posture. The Security Posture Optimizer allowed for irrefutable and quantitative data to back up additional risks and findings previously missed, allowing my team to focus on other key parts of our overall cybersecurity strategy and allowing me to easily communicate results with my board of directors.”

CISO

Fortune 100 Financial Services

“The SafeBreach Security Posture Optimizer allows us to benchmark our subsidiaries with their diverse/unique technology stacks and security controls, and map their compliance with applicable regulatory requirements and internal governance.”
