

SAFEBREACH CTEM PLATFORM

The SafeBreach Analyst Agent: AI-Powered Exposure Discovery

Executive Summary

Organizations already collect massive amounts of exposure data across vulnerability management, threat intelligence, asset inventories, and external attack surface management platforms. The challenge is determining which exposures actually matter.

The SafeBreach Analyst Agent operationalizes the scoping, discovery, and prioritization phases of Continuous Threat Exposure Management (CTEM) by continuously correlating exposure data across internal and external attack surfaces.

Powered by **SafeBreach Helm**, the Analyst Agent combines vulnerability data, threat intelligence, asset context, and environmental intelligence into a unified AI-driven workflow that helps organizations focus on the exposures most likely to impact the business.

How the Analyst Agent Works

Operating within **SafeBreach Helm**, the Analyst Agent continuously scopes, discovers, and prioritizes exposures across the enterprise. The agent correlates data from:

Security teams can interact with **SafeBreach Helm** using natural language prompts to:

- Investigate exposures
- Identify high-risk assets
- Analyze exposure trends
- Assess security drift
- Benchmark posture over time

The result is a continuous, contextualized view of enterprise risk aligned to real-world attacker behavior.

Key Benefits

Business Outcomes

Organizations using the Analyst Agent can:

- ☐ Reduce breach risk by continuously discovering and validating the exposures most likely to be **exploited in their environment**
- ☐ Prove security effectiveness to the board with evidence-based, continuously updated risk data—**not point-in-time snapshots**
- ☐ Focus remediation on what actually matters with prioritized, **business-aligned findings**
- ☐ Free analysts from manual correlation work and redirect their time toward **high-value investigation**
- ☐ Command their attack surface with confidence through a **unified, AI-driven view** of enterprise exposure

OPERATIONALIZES THE CTEM LIFECYCLE

The Analyst Agent powers the early phases of Continuous Threat Exposure Management.

- Scoping
- Discovery
- Prioritization
- Validation
- Mobilization

CONCLUSION

The SafeBreach Analyst Agent helps organizations move beyond fragmented exposure management by continuously discovering, correlating, and prioritizing risk across the enterprise. Powered by **SafeBreach Helm**, the Analyst Agent operationalizes the early phases of CTEM through intelligence, automation, and real-world context.
