

SAFE BREACH CTEM PLATFORM

The SafeBreach SecOps Agent: AI-Driven Remediation & Security Operations Orchestration

Executive Summary

Security teams often struggle to operationalize remediation quickly and efficiently—even after exposures have been identified and validated.

The **SafeBreach SecOps Agent** operationalizes the mobilization phase of Continuous Threat Exposure Management (CTEM) by transforming validated exposures into actionable remediation workflows.

Powered by **SafeBreach Helm**, the SecOps Agent combines AI-guided remediation, workflow automation, and security operations integrations to help organizations reduce Mean Time to Remediate (MTTR) and accelerate measurable risk reduction.

How the SecOps Agent Works

Operating within **SafeBreach Helm**, the SecOps Agent integrates directly with:

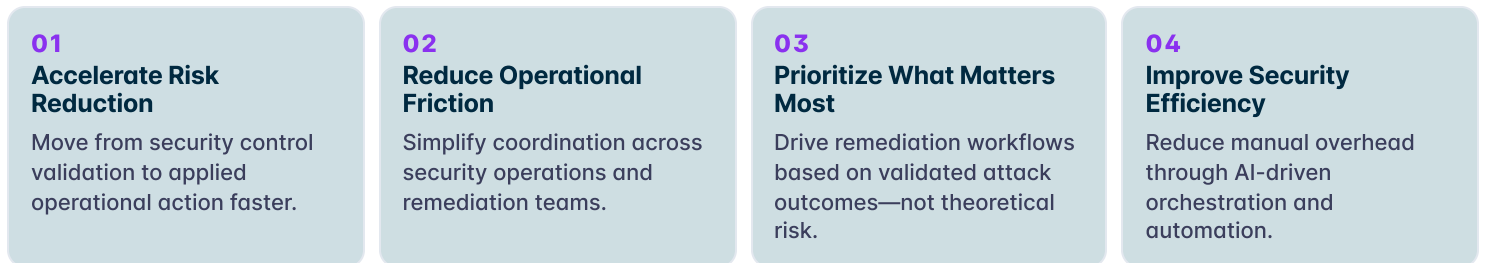

It provides context-aware remediation guidance tied to validated attack outcomes—prioritized by:

- Proven exploitability
- Attack paths
- Asset criticality
- Business impact
- Environmental context

Through workflow automation and natural language interaction, security teams can **trigger remediation tasks automatically**, route findings to the correct stakeholders, track remediation progress, and accelerate operational response workflows.

Key Benefits

Business Outcomes

Organizations using the SecOps Agent can:

- Respond to threats faster by automating coordination and handoffs—measurably reducing MTTR
- Spend time on **decisions, not ticket-shuffling**, by eliminating manual work between detection and fix
- Mobilize the right teams at the right time with AI-driven workflows
- Demonstrate risk reduction to leadership with continuous, measurable evidence
- Turn CTEM from a framework into a **running program**—continuous, not quarterly

ENTERPRISE-READY BY DESIGN

↓ MTTR

measurable risk reduction across the CTEM lifecycle

- Built for remediation workflows that span multiple teams and systems
- Integrates into existing security operations ecosystems
- Strengthens resilience—no rip-and-replace of infrastructure

CONCLUSION

The SafeBreach SecOps Agent transforms validated findings into operational action.

Powered by **SafeBreach Helm**, the SecOps Agent accelerates remediation, reduces operational friction, and enables measurable risk reduction across the CTEM lifecycle.
